Lumax	S-metolachlor + atrazine + mesotrione	3.948 L (2.68 + 1 + 0.268 lb/gal)	15 + 5 + 27	K3 + C1 + F2	Syngenta
Halex GT	mesotrione + S-metolachlor + glyphosate	4.4 L (0.209 + 2.09 + 2.09)	27 + 15 + 9	F2, K3 + G	Syngenta

¹ **Liquid** formulations include AC, applicator's concentration; CS, aqueous capsule suspension; E, EC, or EW, emulsifiable concentrate; F, flowable; L, liquid; ME, micro-encapsulated; SL, soluble liquid; S, suspension. **Dry** formulations include DF, dry flowable; DG, dispersible granules; G, granules; SP, soluble powder; W, WG, or WDG, wettable dispersible granules; WP, wettable powder; WSG, wettable soluble granule.

² Herbicide classification according to primary site of action as described by Weed Science Society of America (WSSA) (number designation) and Herbicide Resistance Action Committee (HRAC) (letter designation). *From Mallory-Smith and Retzinger.*

Rotating herbicides so plants are not exposed to a single herbicidal mode of action for several seasons or plant generations is highly recommended as part of a resistance-management program. The classification presented here can be used as a tool to choose herbicides in different site-of-action groups so that mixtures or rotations of active ingredients can be planned. An attempt should be made to rotate herbicides designated with the same number or letter to those with different numbers or letters (i.e., different sites or modes of action). See table below for sites of action associated with each classification.
