

LIST OF TABLES

Table	Page
1. Stocking date, number of white crappie fingerlings stocked, mean (standard deviation) total length (TL) at stocking, and hauling density of white crappie stocked in Lake Chicot, Arkansas.....	41
2. The number of white crappie fingerlings loaded on the hauling truck, the actual number of white crappie fingerlings stocked after adjusting for a mean 72-h handling mortality of 27%, the corresponding stocking density, black and white crappie natural production in Lake Chicot, and the initial contribution of stocked white crappie to each year class examined.....	42
3. Stocking date, fingerling pond water temperature, container size, number of white crappie fingerlings per container, number of replicates, mean (standard deviation) 24-h and mean (standard deviation) 72-h handling mortality of white crappie fingerlings stocked into Lake Chicot, Arkansas. Handling mortality estimates from thermally shocked and non-thermally shocked fingerlings were referred to as December 11, 2000A and December 11, 2000B, respectively. Handling mortality estimates were inflated due to thermal shock of fingerlings during the December 11, 2000A sample.....	43
4. Water pH from Joe Hogan State Fish Hatchery in Lonoke, AR after being subjected to various treatment concentrations of oxytetracycline-hydrochloride (OTC) and sodium phosphate dibasic buffer, the number of white crappie fingerlings per 18.5-L treatment bucket, the density (kg/L) of crappie per bucket, and the % mortality of crappie after a 3-h holding period. Crappie fingerlings (198 fish/kg) were held in 11.1 L of water with aeration.....	44
5. The stocked year class that was sampled for, the year of sampling, number of trap net nights, total number of black and white crappie sampled from each year class, number of marked white crappie collected from each year class and the final contribution of marked white crappie to the year class for each of the year classes examined.....	45

6.	The sample size (N) and mean relative weight of stocked white crappie sampled from the November 17, 1998, December 10, 1998, and October 2, 2000 stockings and of wild white crappie sampled during December 1998 in Lake Chicot, Arkansas. Mean relative weights followed by the same superscripted letter are not significantly ($P > 0.05$) different.....	46
