New Orleans - the Inevitable City in the Impossible Place

Last week I had the privilege of traveling to New Orleans, which seemed to be thriving. If you wonder how and why New Orleans has been able to recover from the devastation of Hurricane Katrina, consider these factors from George Friedman of Stratfor Geopolitical Intelligence Report. He shared some powerful strategic observations about New Orleans as a port that are not widely publicized:

Breakthrough Solutions Connects Visionary Rev. Arthur Hunt with Grant to Bring Creative Economy to Dumas and Beyond

For Rev. Arthur Hunt, a passion to serve others drives every task, every conversation, and every pursuit. He can’t help it, it’s in his blood.

Now, a USDA technical assistance grant under the Rural Economic Development Innovation initiative is helping him achieve his desire to serve others.

A native Arkansan, Hunt grew up in Dumas where his family founded and ran the West Dumas Community Life Center — a valuable place where community members frequently gathered, met, played, and celebrated.

Kingsland Heritage Center Plans Underway

Two Johnny Cash cousins meet to plan for a Kingsland Heritage Center. (l to r) Rev. Mark Rivers and Wayne Cash meet with a steering committee to plan for a Kingsland Heritage Center in Kingsland AR, birthplace of Johnny Cash. With support from Kickstart Cleveland County, this initiative is a great example of how to honor the legacy and home town of Johnny Cash and develop a significant tourism attraction in Cleveland County.

The meeting, chaired by Chairman Wayne Cash, included reports on multiple ways that the community can brand itself as Johnny Cash’s hometown:

- Install a birthplace marker on Highway 79 that points visitors to his birthplace, and another at his actual birthplace,
Painting the Kingsland water tower with an image of Johnny Cash
Establish a marker at the Kingsland post office, which was dedicated by Johnny Cash in 1994,
Explore renaming a street in Kingsland to be Johnny Cash Way,
Contact the state highway department and local legislators to explore changing the name of a section of state highway 79 to become the Johnny Cash Memorial Highway.

A special thanks to Breakthrough Solutions Partners Ed Levy with Cromwell Architects Engineers, who has developed architectural renderings of what the Kingsland Heritage Center could look like, and Ken Hubbell, who used his talents to facilitate and sketch previous meetings.

Corey Boelkins of Raft Up Addresses Breakthrough Solutions Partners

On Thursday, August 22, Breakthrough Solutions Partners gathered at the University of Arkansas Division of Agriculture’s state office for a meeting featuring Corey Boelkins of Raft Up. Raft Up is an organization that builds technologies that “help connect people to places and each through simpler, safer, and more affordable ways,” according to the Raft Up website. So, what does this look like? In an article by Arkansas Money and Politics, Boelkins says it looks like Facebook for the outdoor community.

For obvious reasons, Raft Up’s creative and innovative model quickly gained recognition. At the Governor’s Conference on Tourism, Raft Up won first place at the inaugural Shark Tank competition. In addition to $5,000 cash prize, Boelkins and his received mentorship and advisement from Innovate Arkansas and the Arkansas Tourism research and development section. Now, a few months later, Boelkins hard work, in conjunction with the mentorship, is beginning to pay off.

Raft Up is now expanding its mobile app efforts to connect regions. Currently a lot of chambers might have resources online but are not tapping into the mobile app market. Raft Up aims to bridge this gap by offering mobile app service that offers “immediate, relevant, valuable, and engaging information for an on-demand mobile society.” On these app platforms, communities and regions can feature community events, interactive maps (that include parks, trails, water ways, links to travel guides.

Interested in how your community or region might leverage these resources? Reply to this e-mail and we can connect you to Raft Up.

Opportunity to Help Assess the Broadband Connectivity

Access to fast and reliable internet service is important to the economic and social...
well-being of all Americans.

Understanding where gaps in service exist is critical to addressing those gaps. There are multiple ongoing initiatives to help identify gaps and service issues across the country by allowing people to anonymously test their connectivity. Data is then added to a national database to more accurately depict the current state of broadband availability and speed.

You can test your speeds through two reputable efforts - [http://broadbandtest.us](http://broadbandtest.us) and the TestIT app (visit [https://www.naco.org/testit](https://www.naco.org/testit) for download instructions). Testing in both rural and urban geographic areas is encouraged, as is testing using all of your devices.

Information gathered through these initiatives includes each device’s IP address, but will not include personal identifying information about the user. Data gathered through both of these efforts is aggregated by Measurement Lab (MLab) and is available for use by researchers and planners seeking to understand and improve broadband availability.

You can also review and compare results with the published results of the Federal Communications Commissions and industry using an interactive mapping feature available at [http://broadbandtest.us](http://broadbandtest.us).

**Story of the Month: Does Your Community Pass the Popsicle Test?**

“The character of cities is tied in with our sense of place,” stated John Jacob with the Texas Coastal Watershed Program. Jacob was speaking at a recent National Association of C.D. Extension Professionals Conference. “We are trying to build vibrant and interesting cities, in harmony with a healthy natural ecosystem.” Jacobs then described walkable neighborhoods as an important element of vibrant and interesting cities, and posed the following tests.

**Tests for a Walkable Neighborhood:**
1) Popsicle Test: Can you get from the corner store to your home without your Popsicle melting?
2) Smooch Test: Would you feel comfortable walking with your date in the evening?
3) Kid Test: Would kids feel comfortable walking in your neighborhood? Better yet, would they enjoy your neighborhood?
4) Senior Test: Can senior citizens easily get around?
5) Commons Test: Are there common places – civic spaces where people can gather easily? Are they built for easy walking, or do you have to drive to them?

**Website of the Month:** The Rural Innovation Equation

A new tool shows that innovation in rural America is associated with higher pay and growing markets. And a new study that develops a broader “innovation index” finds that rural firms are innovative – and that rural innovation has a large impact on firms and the regions in which they operate. This article also includes a map of Innovation...
Quote of the Month

“There’s a temptation in our networked age to think that ideas can be developed by email. That’s crazy. Creativity comes from spontaneous meetings, from random discussions. You run into someone, you ask what they’re doing, you say ‘wow’ and soon you’re cooking up all sorts of ideas.” -Steve Jobs

Coming Events

September 10: Community Development Summit: Southwest Arkansas, sponsored by the UCA Center for Community and Economic Development, Camden AR and hosted by the Ouachita Partnership for Economic Development. For more information, go to https://uca.edu/cced/swa-summit/.
