April 20, 2015

To: Those Involved in Rice and Soybean Production

**Rice Production**

**DD50 program** – The improved DD50 program is now up and running at [http://dd50.uaex.edu/](http://dd50.uaex.edu/). Changes have been made to improve your experience on both your computer and your mobile devices. Login names and passwords have been retained from 2014. New individual producers or consultants should first enroll into the program. The DD50 program is a very important management tool. Please consider entering your fields in the DD50 program this year. A DD50 enrollment card is included for your convenience.

**Flag the Technology** – Flag the Technology is a quick and inexpensive method to prevent misapplication of pesticides and warn of technology that is sensitive to potential off-target drift. Flags can be ordered at parkerflags.com or check with your local coop. We have a few flags in both offices first come first served. Fields can also be entered online in the cloud. **FTTCloud** allows producers to digitally establish connections with their consultants, applicators, and county agents. FTTCloud will have technologies available this year: Enlist, Enlist w/ LibertyLink, and Xtend. Additionally, throughout the coming weeks, tutorial videos covering the various features of the website will be made available for all users. If you have any further questions or need any help, please contact us at fttcloud@gmail.com.
