ROW CROP VERIFICATION

**2018-19 Wheat Research
Verification Program Update**

April 12, 2019

Update No. 9

General	By Chad Norton and Chris Elkins. WRVP fields continue to see excellent growth. Currently we are in the boot and heading stages and carefully watching for disease pressure. Foliar disease pressure has remained low. Temperatures are expected to dip briefly in the upcoming week but we should remain above freezing and are not expecting any damage or slowed growth.		
County	Variety	Feekes Stage	General Information
Ashley	Pioneer 26R41	10.1	Prosaro application in 7-10 days for scab prevention. Looking good.
Greene	Pioneer 26R41	8	Looks good. Disease pressure remains low in the canopy and no insect pressure present. Almost Feekes 9
