Plant Health Clinic 2008 Summary Report

The plant Health Clinic received 2719 plant samples in 2008. Numbers were up 17% over 2006, but fewer samples than 2007. Sample numbers in 2007 were inflated by 981 hosta samples from one nursery requesting virus testing. The largest number of samples in 2008 was ornamentals (33%), followed by field crops (30%), vegetables (12%), and fruit/nut (8%). Training started December 2007 to familiarize county agents, specialists, and secretaries with DDDI, the Clinic's new data entry system:

December 6, 17 agents and secretaries
December 10, 20 agents and secretaries
December 11, 25 agents and secretaries
December 12, 27 agents and secretaries
December 13, 26 agents and secretaries
December 14, 18 agents and secretaries
December 17, 17 agents and secretaries
December 18, 7 agents and secretaries
December 19, 14 agents and secretaries
February 26, 2008, 30 Plant Board Agents

The Clinic officially switched to our new web based data system January 1, 2008.
