

Snow Slime

In a bowl, combine:

2 cups white school glue (or silver glitter glue)

1 ½ cups very warm water

A few drops of peppermint extract (optional)

In a second bowl or measuring cup, combine:

¾ teaspoon of Borax

1 1/3 cups of very warm water

Add the Borax solution to the glue solution and mix well. You will likely need to mix or knead it with your hands to incorporate all of the water. At this point, you may add some iridescent or silver glitter to your slime; however, if you want real sparkle, the glitter glue is more effective.

Play and enjoy!
