

# Estimating Arkansas Farmland Values Based on Historic Index Numbers

**Scott Stiles**  
Instructor - Economics  
Agricultural Economics and  
Agricultural Business

**Terry Griffin**  
Assistant Professor -  
Agricultural Economics  
Kansas State University

Farmland values have generally increased over the past 60 years (Figure 1). A few exceptions to this general trend have occurred – most notably during the 1980s when Arkansas farmland values decreased by 34 percent between 1982 and 1987. However, this decrease during the 1980s followed a nearly 200 percent increase in farmland values during the 1970s. The farmland value high set in 1982 was not exceeded for another 16 years. Since 1998, Arkansas farmland values have increased an average of 9.3 percent per year, with values declining in only one year, 2009, by 3.3 percent.

Over the past few years, the growth rate in Arkansas farmland prices has slowed. This is largely due to lower commodity prices and farm incomes. Following very rapid

growth of 12 percent in 2007, for example, annual growth rates began to taper off and eventually transition to a stable market environment from 2015 to 2016. Current expectations are for Arkansas farmland values to increase in 2017 by 4.3 percent over the previous year.

Historic farmland values are of interest to farmers, landowners, investors and policymakers. The farmland value index in Table 1 can be used to estimate farmland value in a given year if the value was known for any other year since 1958. The Guide to Using the Arkansas Farmland Value Index section accompanies Table 1. Index numbers were calculated based upon the year 1982; therefore, the index value for 1982 equals 100.

**Table 1. Index Numbers<sup>1</sup> of Arkansas Farmland Values**

Year	Index (1982 = 100)	Year	Index (1982 = 100)	Year	Index (1982 = 100)
1958	8.94	1978	55.29	1998	104.93
1959	9.22	1979	70.26	1999	111.31
1960	10.31	1980	83.76	2000	117.70
1961	10.77	1981	96.35	2001	123.18
1962	11.77	<b>1982</b>	<b>100.00</b>	2002	128.65
1963	13.32	1983	88.69	2003	135.04
1964	15.15	1984	87.96	2004	149.64
1965	16.97	1985	82.76	2005	168.80
1966	18.52	1986	71.08	2006	182.48
1967	19.07	1987	66.06	2007	204.38
1968	20.62	1988	69.43	2008	220.80
1969	22.45	1989	73.08	2009	213.50
1970	23.72	1990	72.63	2010	218.98
1971	23.27	1991	76.73	2011	222.63
1972	27.01	1992	74.36	2012	239.05
1973	30.75	1993	80.29	2013	246.35
1974	37.04	1994	84.58	2014	260.04
1975	38.23	1995	89.69	2015	278.28
1976	43.34	1996	92.15	2016	278.28
1977	49.45	1997	97.63	2017	290.15

<sup>1</sup>Index numbers based on 1982 = 100 are calculated from USDA sources including NASS and ERS.

Some years have been revised compared to previous versions of this table due to updates from the Census of Agriculture.

## Bottom-Line Considerations

Index numbers are based on nominal values and are not based on real values adjusted for inflation or purchasing power. Although it is useful for estimating the value of Arkansas farmland relative to another point in time, the index number only provides a single piece of information to include with other information in the decision-making process.

The value of farmland fluctuates for a variety of reasons and provides opportunity for farmers,

landowners and investors. With a continued change in the market for Arkansas farmland, owners and potential owners of farmland can use index numbers based upon USDA information to estimate the value of land given a known value in another year. Estimated farmland values do not substitute for land appraisals and may deviate from true market value for any number of reasons, including land improvements, buildings and facilities, pressure from development and urban sprawl, mineral rights and previous farm production management practices.

## Guide to Using the Arkansas Farmland Value Index

The index for farmland values can be used to estimate the farmland value for a past year or to estimate the value of farmland in the current year, depending upon the given information. If the value of farmland is known in any year, the value can be estimated for any other year since 1958 with the farmland value index.

### Estimating the farmland value for a past year

The farmland value for a past year can be estimated with the formula:

$$\text{farmland value from past year} = \text{current farmland value} \times \frac{\text{index from past year}}{\text{index for current year}}$$

**Hypothetical Example 1:** Current land values are \$3,180 per acre. What was the value of this land in 1987? Using the table, the index for 1987 and 2017 are 66.06 and 290.15, respectively.

$$\text{estimated 1987 farmland value} = \$3,180 \times \frac{66.06}{290.15}$$

estimated 1987 farmland value equals \$724 per acre.

### Estimating the current farmland value based on the value in a past year

Current farmland values can be estimated using past values with the formula:

$$\text{current farmland value} = \text{farmland value from past year} \times \frac{\text{index for current year}}{\text{index from past year}}$$

**Hypothetical Example 2:** My relative paid \$800 per acre for land in 1994. What is the estimated value of this land today? Using the table, the index for 1994 and 2017 are 84.58 and 290.15, respectively.

$$\text{Estimated 2017 farmland value} = \$800 \times \frac{290.15}{84.58}$$

Estimated 2017 farmland value equals \$2,744 per acre.
