

# Landscape Trees for Specific Uses

James A. Robbins  
Extension Specialist/  
Professor - Ornamental  
Horticulture

Trees add a great deal of value to our landscapes. They add value in a variety of ways including providing shade, reducing energy costs on buildings and homes, increasing property values, stabilizing soil, improving the health of our environment and adding beauty to our landscapes.

Trees are planted in the landscape for a variety of aesthetic and environmental reasons. In locations where trees may be planted near or under utility wires, the ultimate size of the tree must be considered so long-term conflicts do not develop. A number of large shrubs or small trees can provide planting options near or under utility

wires (Table 1). Trees also offer options as street trees (Table 2), in narrow planting situations (Table 3), and as lawn or shade trees (Table 4). Some trees are less desirable than others due to short lifespan or excessive debris from flowers, fruits or brittle wood (Table 5). Before planting any vegetation, contact Arkansas 811 ([call811.com/map-page/arkansas](http://call811.com/map-page/arkansas); 1-800-482-8998 or call 811) to locate any underground utilities. Unless

specified otherwise in local ordinances, trees and other vegetation should not be planted within 10 feet of any utility service equipment, including access boxes for buried power lines.
