¹ Always read and follow the label.

² Most 2,4-D labels state rotation to all crops after 90 days or until sufficiently dissipated.

³ Days listed are based on University data and after receiving 1.0 inches or more rainfall – 8 oz 14d and 16 oz 28d to beans.

⁴ I = immediately, d = days, m = months.

⁵ Labeled plant-back to soybean is 30d for 1.5 oz/A and 60d for 2.0 oz/A – must plant STS or BOLT beans to avoid injury.

⁶ Rotational intervals are determined by rate – see label. Intervals shown are for 2.0 oz/A.

⁷ Rotational intervals increase with rate.

[†] T=Tolerant, M=Moderately Tolerant, S=Sensitive, VS=Very Sensitive; T* Some crops are available with herbicide tolerance to these herbicides. These ratings are based on the best available information to date and on foliar application or drift.

^{††} Some soybeans are available with tolerance to ALS herbicides, STS or BOLT Soybeans; this tolerance varies for rice ALS herbicides.

Smart Stack and Herculex are tolerant to glyphosate and glufosinate. Tolerance does not imply that this herbicide is labeled for a specific crop.
