A suggested equipment cleanup procedure to follow immediately after applying phenoxy formulations is:

1. Flush system completely with detergent water; drain.
2. Flush system with ammonia solution (1 quart ammonia per 25 gallons water); drain.
3. Fill system completely with above concentration ammonia solution; let stand overnight.
4. Drain system next day; flush with excess water.
5. Flush system the day before next use.
6. Clean outside of equipment and nozzle assemblies in above manner.

This method is not foolproof but should reduce the hazards involved in applying phenoxy amine herbicides.

Some chemicals used for weed control can be injurious to man if handled carelessly. They can also be injurious to desirable plants, livestock, wildlife and fish if improperly applied. Care should be exercised in the use of herbicides and the disposal of unused herbicides to avoid polluting streams and water supplies. Precautions for handling and applying that are printed on the container label should be followed.
