

Installation and Configuration of the Cisco AnyConnect VPN on the iPad/iPhone

1. Go into the Apps store and search for **Cisco AnyConnect**

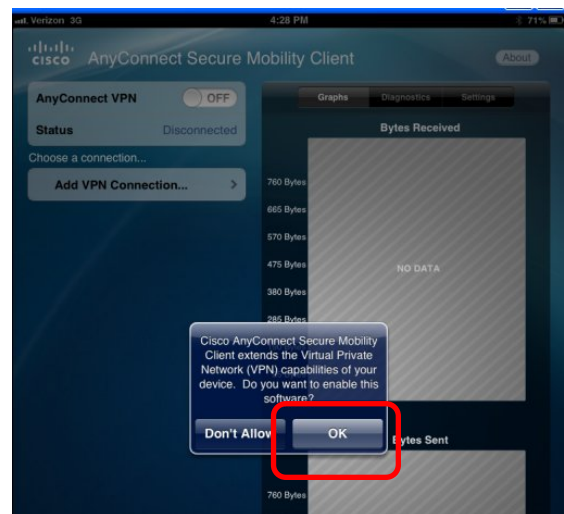

2. Install the Cisco AnyConnect App

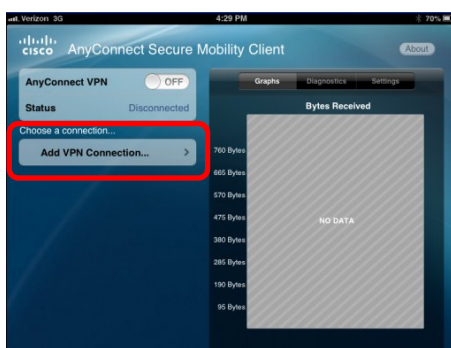

3. Open the Cisco AnyConnect App

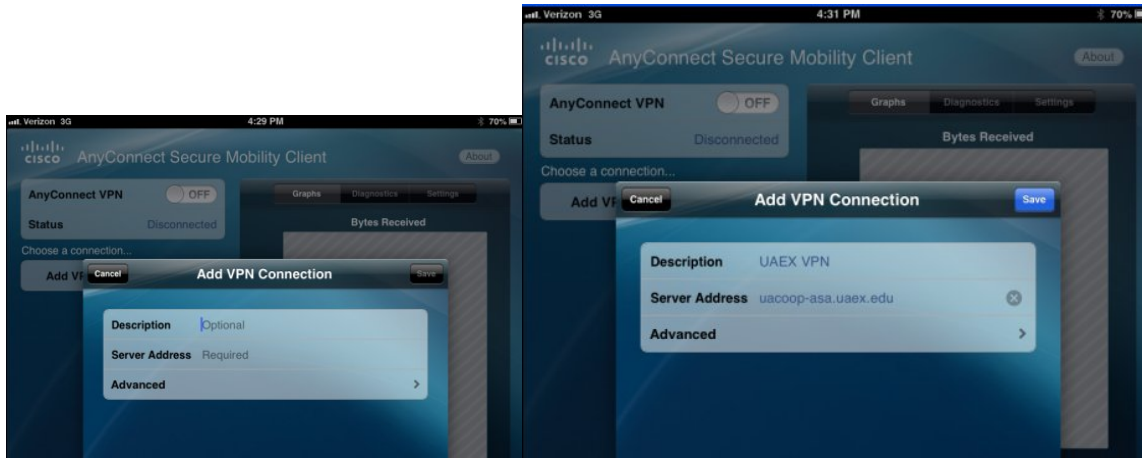

4. Click on **OK** at the "Do you want to enable this software?" dialog box.

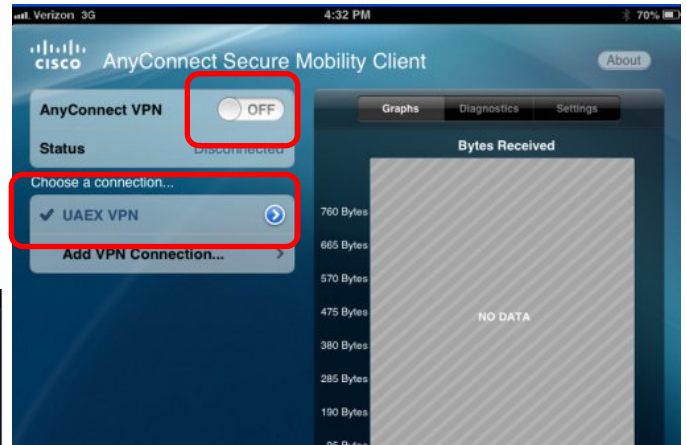

5. Click on **Add VPN Connection**

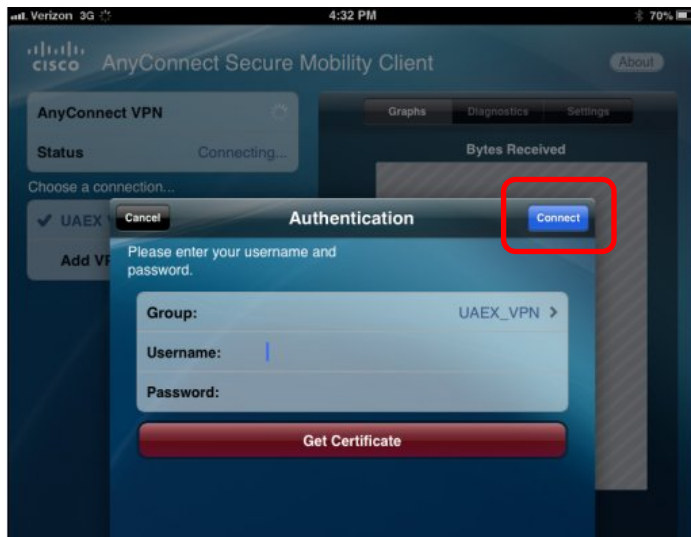

6. Enter the following Info: Description – **Give your connection a name**
Server Address – **UACOOOP-ASA.UAEX.EDU**
Click on **SAVE** to save your settings.

7. With your newly created connection checked, turn your VPN **ON** by moving the switch to **ON**.

8. Enter your Authentication info (**AD Username and Password**) – click on **Connect**.

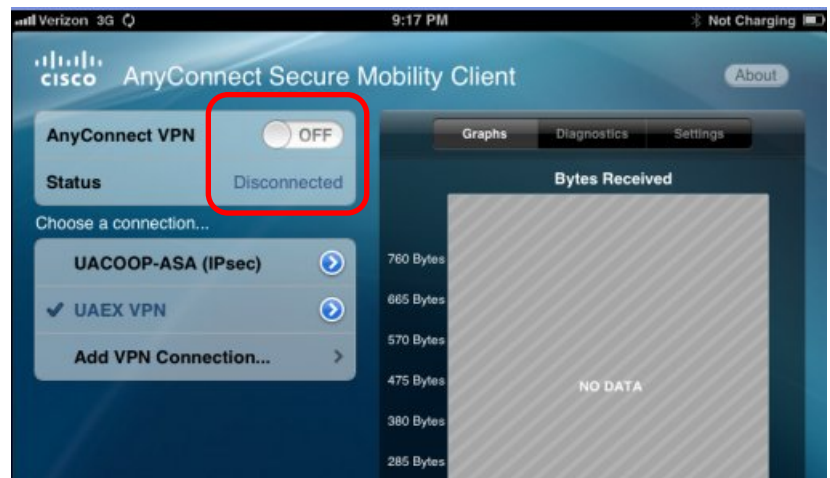

9. Status should now say Connected.

10. Click you Home button and continue on to whatever application you need (VNC, Remote Desktop, etc...).

11. Once you have completed your work make sure you disconnect from the VPN by sliding the ON button OFF.

FYI:

1. The software will automatically create another Connection called UACOOP-ASA (IPsec). Always ensure you are using the one you created by making sure it is checked.
2. You will have to enter your password every time you connect.
3. Remember to always turn your VPN connection on before trying to complete your work that requires an inside network connection.
