Initial Setup for LRSO_WIFI (Secure) on IOS Devices

If you have any problems please contact the Call Center for assistance.

1. Open up **Settings**.

2. Highlight **Wi-Fi**. Turn it **On** if it is **Off**. If you are currently connected to a different wifi, you must first disconnect by clicking on the blue arrow, then Forget this Network. You are now presented with a list of available networks. Click on **Other**…

3. Enter the Name: **LRSO_WIFI** (this must be all caps with the underscore, typed just as shown).

4. Click on Security and then choose: **WPA2 Enterprise**. Click on Other Network (top left) to return to the setup page.

5. Enter your Active Directory user name and password. Click on Join. You may have to do this several times.

6. You will be asked to accept the certificate, click on **Accept**.

7. You should now be connected to our secure Wifi. This network will connect automatically each time you get within range until your password changes. At that point you will be asked to login again.
