Initial Setup for LRSO_WIFI (Secure) on Windows 10

If you have any problems please contact the Call Center for assistance.

Windows 10 doesn’t require an initial setup in order to use the LRSO_WIFI. For the first time user, just click on the LRSO_WIFI network and enter your AD credentials. If you are presented with a warning “Continue Connecting?”, click on Connect to complete the connection.

If you experience any issues connecting to the LRSO_WIFI network (ex: you change your password and need to reenter it), follow the instructions below to reset the connection so it will prompt for credentials again.

Another potential issue we have experienced is too many wifi connections in the cache. Just follow the instructions below to solve this issue as well.

1. Right click the Windows Start symbol (lower left corner).

2. Click on “Network Connections”.

3. You will see the Network Connections dialog - Double click the Wi-Fi adapter.

4. You will see the Network & Internet dialog - scroll down and click on “Manage Wi-Fi Settings”.

The Arkansas Cooperative Extension Service offers its programs to all eligible persons regardless of race, color, sex, gender identity, sexual orientation, national origin, religion, age, disability, marital or veteran status, genetic information, or any other legally protected status, and is an Affirmative Action/Equal Opportunity Employer.
5. You will see the Manage Wi-Fi Settings dialog - Scroll to the bottom of the list under Manage Known Networks and clear out the connection giving you problems and any other older connections. Do this by clicking on each and then clicking on the **Forget** button. Close all windows when complete.

You should now be connected to the LRSO_WIFI network.
