Initial Setup for LRSO_WIFI (Secure) on Windows 7
If you have any problems please contact the Call Center for assistance.

1. Click on the WIFI icon in the bottom right corner to open the Wireless Network Connection dialog.

2. Click on **Open Network and Sharing Center**.

3. Click on **Manage Wireless Networks** on the left hand side.

4. The Manage Wireless Networks dialog appears. Click on **Add** to create a new network profile.

5. Click on **Manually create a network profile**.
6. Fill in the **Network Name** and **Security Type** as shown, then click on **Next**. (The network name must be **LRSO_WIFI**, upper case with the underscore).

7. Click on **Change Connection Settings**.

8. Click on the **Security tab**. Make changes to the settings as shown. If AES (MFP) is not available then leave it AES.

9. Click on **Settings** next to Microsoft: Protected EAP (PEAP).
10. Uncheck – **Validate server certificate**.

11. Click on **Configure… Next to EAP-MSCHAP v2)**.

12. Uncheck – **Automatically use my Windows Logon....**, then click on **OK**.

13. Click on **Advanced Settings**.
14. On the 802.1X Settings tab, make sure that Specify Authentication Mode is Checked and the User or Computer Authentication is selected.

15. On the 802.11 Settings tab, make sure Enable Pairwise Master Key (PMK) Caching is Checked, and the 720 and 128 are entered.

16. Click on OK, then OK again and then click on Close. Then exit out of the Manage Wireless Networks dialog box.

17. To connect to the newly created profile, click on the WIFI icon in the bottom right corner. If the LRSO_WIFI says connecting click on it and then click on Disconnect.

18. Once disconnected, click on Connect and you will be prompted for your user name and password. Enter your active directory user name and password. Click OK.
