

Using Cisco AnyConnect VPN on Windows Computers

1. To connect to the UAEX VPN just click the AnyConnect icon in the bottom right corner of your task tray, or on your taskbar, and then click on Connect. If you receive a Security Warning click on Connect Anyway. You will need to enter your VPN password every time (same as your Active Directory).

Once you are connected to the VPN the icon will show a lock on it.

2. When you have completed your work disconnect from the VPN by clicking the AnyConnect icon in the bottom right corner and clicking on Disconnect.
