We are excited to kick off the first week of National Cyber Security Awareness Month. For this week we are focusing on how to secure yourself at home. We have resources to help you, starting with the following.

- On Tuesday you will receive a security awareness newsletter on protecting your home network.
- On Wednesday you will receive a poster on protecting your home.
- On Thursday you will receive information on how to protect your kids online.
- On Friday we will be sharing a video with you on the top three risks to kids online today and what you can do about those risks.

You are encouraged to share these materials with others, including your family, friends and neighbors. If you have any questions about our activities in October or suggestions on how to improve our cyber security efforts, please contact your CyberSecurity Team.
