Subject: National Cyber Security Awareness Month - Week 2 – The theme is Creating a Culture of Cybersecurity in the Workplace

Attachments: None

We are excited to kick off the second week of National Cyber Security Awareness Month. For this week we are focusing on how to secure yourself at work. We have resources to help you, starting with the following.

- On Tuesday you will receive a security awareness newsletter on CEO Fraud. This has become a very common and highly successful attack technique used by cyber criminals around the world. You need to be aware of this.
- On Wednesday we will be distributing a poster on why you are a target, identifying all the different ways cyber criminals can make money from hacking you.
- On Thursday we will be linking to a security awareness video on Targeted Attacks.
- On Friday we will be sharing a site where you can learn more about protecting yourself online with daily security awareness tips.

You are encouraged to share these materials with others, including your family, friends and neighbors. If you have any questions about our activities in October or suggestions on how to improve our cyber security efforts, please contact your CyberSecurity Team.
